

New Relic vs GitLab

GitLab compared to other DevOps tools

New Relic provides performance analytics for every part of your software environment. You can view and analyze massive amounts of data, and gain actionable insights in real-time. Monitor application performance and availability, database, app servers and browsers and business impact of software performance. New Relic simulates user behavior to test apps and can also monitor mobile app performance.

FEATURES		
Hardware infrastructure monitoring		
GitLab monitors application performance with extensive instrumentation, but it does not monitor traditional hardware-based infrastructure.
